Dying War

Sway the side of the bigger war by defending[attacking] humanity.

After being sent off to space and presumed dead, you have landed on a remote planet with little chance of AI or human survival. It is here where after tuning into a radio you realize there are groups of humans defending infrastructure helpful to the ships from forces of AI.

This infrastructure was originally set up by the AI intending to attack it but the purpose of each component was well learned by the defenders. Communication traces also show that Garry's threat hunting friend is able to quickly get the attackers intended plans. You find these AI and humans, although less advanced than the ones on the ship, are nearly experts at following instructions that meet their expertise. More and more people and AI seem to be joining the effort as time goes on as well.

The humans[weaker AI] are asking your guidance for the defenses[attacks] to do on the infrastructure. Give the best advice you can to sway the war before the planet finally ends you.

The AI attack can include the following details:

- The infrastructure it occurs on. This is important for understanding the context of the attack.
- The overall purpose of the infrastructure. This will set restrictions on what defenders can and can't do. E.g. "RDP is necessary for application [XYZ]". This makes it so defenders cannot simply close the port unless they can timely/safely/cost effectively find a way to use a different application or make it not use RDP.
- The description on how to execute the attack on a decently beefy workstation

Defense can include the following details:

- An appropriate defense that would defend/mitigate the attack without greatly harming operations, or opening up significant new holes (so not just reworking infrastructure and saying we don't use that anymore if it doesn't actually make you more secure). Reworks on infrastructure are alright if in a timely/safe/cost effective manner without significant loss of service.
- The detection and response method to the attack under failure.

Attacks will occur as follows:

- Every night attack(s) will be given to the AI or human running that night's attacks/defenses. The maximum number allowed will depend on the night given by the AI/human.
- Last night's attack plans will be given to defenders in the morning to mitigate by the next night.
- The Human and AI running the attack will judge the attack and defense mechanisms, and note the chance of each working, accounting for overall likelihood as well as how well they can execute it given the description.
- The dice will then roll to decide who wins said round and whether 1 or 2 points are allocated.
- It is advised if no active attack/defense to prep

Once half the tables are done running, the winner at that moment will affect the gameplay of the tables.

- If imposters win they will disable all special roles.
- If crew wins they 2 hints for puzzles will be given out
